

PROBLEM 1:

Write a query to get the number of employees in the Accounting department, the total sum of their salaries, and the average salary. The average must appear 2 times in the results, one of them must be calculated using the AVG function, and one without using the AVG function. Please add column aliases to make it easy to understand the columns in the result.

EXPECTED OUTPUT:

EMPLOYEES	TOTAL_SALARIES	AVERAGE_SALARY	MANUAL_AVERAGE_SALARY
4	11050	2762.5	2762.5
